

AUTOMATICALLY ENABLING INFORMATION TO BE DISPLAYED
AFTER A PROCESSOR-BASED SYSTEM IS TURNED OFF

Abstract of the Disclosure

5 A system enables personal information manager (PIM)
applications to continue to provide alerts and other time
sensitive information even when the system upon which the
PIM is stored is turned off. Automatically data may be
transferred from a first processor-based system to a second
processor-based system to implement time sensitive
activities. The second processor-based system may provide
a user notification at a predetermined time preset on the
10 first processor-based system.
